

Together for Safety

Agreement of Developers and Substitute Investors for the promotion of safety, mutual support and cooperation in areas where life and health are the most important, i.e. primarily in the field of occupational safety and health (OHS).

1. Construction is still a high-risk industry, which is why we - investors, as hosts of our projects, want to consciously and responsibly approach the most important issue of health and life of people working on construction sites, as well as the safety of people using the completed facilities.
2. The BB Agreement is an initiative of companies for which broadly understood safety is an important and inseparable element of their business strategy.
3. The purpose of the Agreement is to establish close cooperation between its members. As market leaders, we have a real impact on its development, hence our intention is to build awareness of a modern approach to health and safety management.
4. The basic assumption of the Agreement is the conviction that all accidents and ill-health can be eliminated through:
 - increasing the involvement of investors in the OHS management process;
 - creating a work culture in which occupational health and safety is one of the fundamental values of action;
 - cooperation with the Agreement for Safety in Construction;
 - building design, taking into account health and safety aspects at subsequent / other stages of the life cycle of buildings;
 - impact on health and safety legislation;
 - exchange of knowledge and experiences.
5. Implementation of the investment, taking into account health and safety as an integral part of the project management process, leads to:
 - preventing accidents and ill-health and reducing the related costs;
 - overall improvement of working conditions, including workers' well-being;
 - increasing the attractiveness of the company as a socially responsible employer;
 - direct image benefits in the internal and external environment of the company.
6. The agreement is open to all developers and companies acting as Substitute Investors on the Polish real estate market, which are ready to discuss the future of the industry in terms of active involvement in safety management.
